

TTC matters

■ TTC on-call support:

- We still have to keep in mind that there is no on-call support from PH foreseen for the TTC system
- What support is agreed?
 - Global system (CCC-end to the optical fibre) => tbd
 - No piquet from PH
 - best effort difficult
 - Experiments => their own responsibility
 - Second level hardware support (offline) => Markus, Sophie

■ Optical Fibers:

- TS/EL (Luit De Jonge) is now attributing the buried optical fibres to its users
 - These fibres are installed
 - But as the needs are increasing, a precise attribution must be done
- TTC (and BST) users will have to describe their needs
 - Typically on the order of 4 fibres/ experiment for the TTC
 - 2 active (1 per ring?)
 - 2 spares
 - BST?
